CURV 500®
Portable Array System
Entertainer Set

The CURV 500® is an innovative system, uniquely combining portability, sound perfection and ease of use. The system comprises 3 components that can be connected with ease.

It is based around the SmartLink® adapter. Up to four Array Satellites can be effortlessly interconnected with the LD Systems-patented click mechanism delivering plug-and-play convenience. The adapter also provides the connection to the subwoofer, which serves as a control unit for the entire system, acting both as traditional bass box and mixing desk.

GUESS WHY IT'S CALLED "SMARTLINK®"?

The innovative SmartLink® adapter forms the basis of the system. On top of that up to four Array Satellites can be effortlessly interconnected with the LD Systems-patented click mechanism: simply press the connection button, join the two modules by their guide rails and release the button to engage.

Easy-Click? Plug-and-Play? Whatever. Connected in 2 seconds is what counts. That's at least what our engineers thought. The mechanical connection also provides signal transmission: no other cables are needed.

SIZE: XS
SOUND: XL!

The speaker columns are equipped with up to four modular array satellites arranged in a curve. The result is extremely clear, three-dimensional sound – similar to the sound generated by large line arrays.

Even a single 12 x 12 cm array satellite produces excellent sound results. This is guaranteed by LD Systems' in-house developed WaveAhead® technology, whereby three tweeters are arranged vertically in front of a high power fullrange driver, perfectly blending and dispersing the sound.

SOUND TO GO.

The CURV 500® is the first truly portable modular array system. Sophisticated technology, elegant design and a modularity that enables it to be transported conveniently and compactly.

Actual Size

A masterpiece of design technology and simplicity: the aluminium unibody construction of the CURV 500® array satellites sets new standards and is an essential component of the system's outstanding audio quality.

Singer-songwriters, jazz musicians, entertainers, speakers: everyone loves technology that fits into any trunk, is simply to assemble and produces the very best results. Like the new CURV 500®.

The integrated 4-channel mixing desk provides connectivity for microphones, instruments and laptops. Its built-in Bluetooth® technology permits wireless data transmission from smartphones or tablets and digital sound effects can also be generated via the 24-bit processor.

POWER TO THE PEOPLE.

The CURV 500® is an all-rounder – for music and for speaking. It provides a big live music sound, is a DJ's high-performance powerhouse and delivers clear spoken words and lectures. Thanks to its versatility, it is also ideal for use on exhibition stands, in clubs and smaller spaces. It represents an ideal, ultra-portable unit for stand-alone entertainers, bands and speakers and always delivers the right sound. One way or another: the audience listens. With pleasure.

Extremely high-performance
as a double pack:
the CURV 500® Power Set.

The CURV 500® feels at home wherever there's music playing: in bars, clubs, studios and even as a home entertainment system. It can be permanently installed with versatile wall and ceiling bracket systems wherever perfect sound quality is called for. This is where the benefits of the compact CURV 500® come into their own.

(CURV 500®AVS also available in white!)

One system – several options. The CURV 500® can be installed on the wall or ceiling, depending on the configuration of the space. Up to 4 Array Satellites can be combined, in ascending or descending order, using the discreet fixing modules and the phoenix connectors on the rear side of the SmartLink® adapter. Whatever works best!

BIG TECHNOLOGY: COMPACT DIMENSIONS

LD Systems' WaveAhead® technology places a vertical tweeter array in front of a high-performance full range transducer. This proprietary design reduces reflections from ceilings and floors resulting in clear, consistent coverage.

The tightly packed tweeter array allows a seamless coupling of satellites. The result: everyone in the audience enjoys the same excellent sound experience, regardless of where they are standing in the venue.

Loudspeaker with WaveAhead® technology

Symmetrical horizontal dispersion

Wide dispersion of mid and high frequencies

Conventional loudspeaker

Asymmetrical horizontal dispersion

Wide dispersion of mid frequencies, narrow dispersion of high frequencies

The coaxial arrangement of the WaveAhead® technology solves the interference issues of conventional loudspeakers and allows for a wide and even sound dispersion. With this unique setup you get the best of both worlds, an extra large sound coverage and a very compact design.
